

Raghav Jindal

Backend / Full-Stack Engineer · Node.js · TypeScript · PostgreSQL · AWS

Bengaluru, India · +91 80156 37209 · raghavjindal0212@gmail.com · portfolio-1-chi-nine.vercel.app · github.com/HiberNuts

Backend-first engineer with 3+ years shipping production systems for early-stage teams. Builds reliable APIs, data models, real-time services, and customer-facing products end to end. Experience spans high-volume public platforms, fintech/payments, AI voice agents, food delivery, and mobile apps; comfortable owning ambiguous problems from architecture through deployment.

EXPERIENCE

Riverline · Software Engineer May 2026 – Jul 2026
Bengaluru · AI debt-resolution platform

- Helped build a borrower-first platform for banks and digital lenders using multilingual AI agents across calls, WhatsApp, email, and SMS.
- Worked on production workflows for automated campaigns and real-time operational visibility, where correctness and dependable customer communication were central.

CrackedDevs · Founding Engineer May 2024 – May 2026
Remote · Startup product engineering

- Owned architecture, backend services, integrations, infrastructure, and deployment for startup clients across AI, payments, trading, and consumer products.
- Shipped 0→1 systems directly with founders on tight timelines, then monitored, debugged, and iterated them under production constraints.
- Built real-time AI agents, data pipelines, crypto payment systems, and low-latency services using Node.js, TypeScript, PostgreSQL, Redis, AWS, and Rust.

DecentraClasses · Co-founder & Developer 2022 – 2024
Remote · Product ownership

- Built a full-stack learning platform from zero to production with Next.js, Node.js, MongoDB, IPFS, live cohorts, a CMS, and user progress dashboards.
- Designed an in-browser Solidity editor with real-time compilation and auto-evaluation, plus certification and token-gated access flows.

Tamil Nadu Engineering Association · Full-Stack Intern 2023
Migrated legacy government systems for a counselling platform used by 100,000+ students in one month and allocating seats across 500+ institutions.

Cookr · Full-Stack Intern 2022 – 2023
Shipped customer ordering, cook registration, and order-management features in a production food-delivery codebase with code review and CI workflows.

SELECTED SYSTEMS

Qwik · Fintech banking backend
Node.js/TypeScript/PostgreSQL APIs powering cards, payment processing, budgeting, and financial analytics; designed around correctness in transactional workflows.

Street Mint · Solana + NFC commerce
Physical-digital collectibles platform that processed 10,000 orders across 714 collectibles and 5,700 NFC taps; coordinated checkout and on-chain/off-chain state.

Rods Sniper · Low-latency execution
Rust/WebSocket system detecting new Solana tokens and executing within 0–2 blocks, emphasizing deterministic performance and failure recovery.

CORE SKILLS

Node.js

TypeScript

JavaScript

Express

PostgreSQL

MongoDB

Redis

Prisma

REST APIs

Microservices

System Design

AWS

CI/CD

Docker

Git

React

Next.js

Flutter

Tailwind

AI Agents

Real-time Systems

Rust

Solana

ROLE MATCH

- Consumer workflows:**
food delivery, ordering, onboarding, payments
- Scale & reliability:**
100k+ public users, low-latency execution, production operations
- End-to-end ownership:**
architecture → APIs → UI → deployment
- Startup execution:**
founding engineer and co-founder scope

EDUCATION

B.Tech, Information Technology
Government College of Technology
2020–2024 · CGPA 8.6/10

RECOGNITION

- Winner** · ETH India 2024
Winner · ETH Singapore 2023
